SAVINGS GOAL CALCULATOR

NAME(S) | DATE | ACCOUNT(S) USED

Goals and the monthly amount each needs

Goal	Target	Saved so far	Months left	APY %	Monthly, no interest	Monthly, with interest	Interest earned
All goals							

How long goal 1 takes at other amounts (no interest)

If I save per month	Months to reach target	Months sooner / (later) than plan	Reached by

Monthly with interest uses the standard future-value formula: deposits made at the end of each month into an account paying the APY shown, compounded monthly. For short goals or low rates the difference from the flat figure is small; for a five-year goal at 4% it is noticeable. Rates change, so recheck yearly.
